7 Scissor Lift Checks

you need to make on a regular basis

"Although Planned Preventative Maintenance (PPM) is the Law and needs to be followed, it's also wise to conduct additional checks on your internal or external scissor lifts, because it will help keep employees even more safe 'between' official checks.

It will also increase the lifespan and maintain the efficiency of your equipment, because you'll be more aware of any damage or degradation to your scissor lifts, and be able to take preventative action sooner.

Here are the seven checks I would highly recommend you make."

Ken Oldfield, Loading Systems Product Manager

Are there any issues?

If you find any of these issues, please get in touch with us, and we can either help you repair and update your existing solution, or we can quote you for an upgrade.

0800 085 3211

1

Is the lift stable during operation?

2

Check for any visible damage

3

Are all gates and inter-locks working correctly?

4

Are there any signs of oil leaks?

5

Is the power pack running noisily?

6

Are roller-blinds or mesh curtains damaged or snagging?

7

Are buffer posts and buffers in good condition?

Did you know we also install and maintain vertical dock levellers, vehicle restraints, loading houses and industrial doors?
